

In May, Mike Schwing once again took center stage showing us one of his favorite techniques for a Quick and Satisfying finish. Starting at the sanding stage, Mike progressed through various grits and micro mesh before applying Mylands Sanding Sealer. Steel Wool and then the Beall Buffing system completed the process with everyone in attendance very impressed with the results. The level of interest was apparent as many jumped up to feel the results as each stage of the process produced even more remarkable results.

Mike prepared a handout describing the process in detail, including information and links on each of the products used. Download the handout from our resource page for the detail.
